BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

REMARKS

Claims 1-19 are pending in this application. It is noted that in the Office Action Summary Sheet enclosed with the office action of January 27, 2004, the examiner has indicated that claims 14-17 are allowed, claims 1, 2, 4, 8, 9, 13, 18, and 19 are rejected, and claims 3, 5-7, and 10-12 are objected to. It appears, however, an incorrect detailed action was attached to the Office Action Summary Sheet, as pages 2-5 of the office action list a serial number of 10/288,292. Attached herewith is a copy of the office action of January 27, 2004, that applicants received from the U.S. Patent and Trademark Office. On February 6, 2004, the examiner indicated in a telephone conversation with the undersigned that a new, corrected office action would be sent. However, the applicants' attorneys have not received a new, corrected office action.

In accordance with 37 C.F.R. § 1.104(b), applicants respectfully submit that the office action of January 27, 2004, is incomplete and request the issuance of a corrected office action, which automatically establishes a new date from which the statutory period runs.

APPLICANTS' INTERVIEW SUMMARY RECORD

Applicants' attorneys, Gregory C. Mayer (Reg. No. 38,238) and Marla L. Hudson (Reg. No. 43,680), held a telephonic interview with Examiner Mahmoud Gimie on January 15, 2004.

During the interview, Masaki USPN 4,280,471 (i.e., the cited reference) was discussed in relation to independent claims 1, 14, and 18. Specifically, applicants' attorneys pointed out that the cited reference does not disclose or suggest a linear actuator as recited in independent claims 1 and 18, or an actuator rod directly driven by the apparatus adapted for linear movement along the second axis as recited in independent claim 14. Examiner Gimie advised the undersigned attorneys that claim 1 would be rendered allowable over the cited reference if it more clearly distinguished between a first axis and a second axis, as recited in claim 14. While no agreement was reached, Examiner Gimie stated that he would further review the cited reference in light of our comments and allow the claims if he agrees with our remarks.

Application No. 10/036,83.

The applicants' attorneys thank Examiner Gimie for the courtesy of granting the telephonic interview and for the examiner's helpful comments during the interview.

Respectfully submitted,

MARSHALL, GERSTEIN & BORUN LLP

March 3, 2004

DETAILED ACTION

Overview Of Office Action

- 1. The finality of the last office action has been drawn in view of the telephone interview on 1/15/04.
- 2. Claims 1-19 are pending in this application

Drawings

3. Figures 4-6 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1,3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over admitted prior art of figures 4-6 in view of Bergstrom et al (5,328,100). Figures 4-6 show a high-pressure fuel supply system comprising: a low-pressure fuel suction passage (2) connected with a fuel tank (10); a high-pressure fuel discharge passage (4) connected with a delivery pipe (16) which is in turn connected with a fuel

Page 3

Application/Control Number: 10/288,292

Art Unit: 3747

injection valve[s] (17); a [high pressure] fuel pump arranged between said low-pressure fuel suction passage and said high-pressure fuel discharge passage and being operable, during reciprocation of a piston in a sleeve, to open a suction valve to suck fuel from said low-pressure fuel suction passage (2) into a fuel pressurization chamber on a suction stroke and to open a discharge valve to discharge the fuel in said fuel pressurization chamber to said high-pressure fuel discharge passage (4) on a discharge stroke; a relief passage (6) connecting between said fuel pump and said low-pressure fuel suction passage; and an electromagnetic valve (7) arranged on said relief passage and adapted to be opened to control an amount of fuel discharged from said fuel pump on a discharge stroke; said electromagnetic valve comprising: a plunger (40); a valve seat (42) with which said plunger is caused to move into and out of contact so that said valve seat is placed into fluid communication with said fuel pressurization chamber when said plunger is moved apart from said valve seat; a stopper (43) for limiting the distance of separation of said plunger from said valve seat; an armature (45) made of a magnetic material and fixedly secured to said plunger; a core (46) arranged in an opposed relation with said armature; a solenoid [coil] (47) wound around said core (46) for attracting said armature (45) toward said core through an electromagnetic force when energized; and a spring (48) for urging said plunger (40) in a direction toward or away from said valve seat (42).

Figures 4-6 do not show a groove formed in the vicinity of opposed surfaces of said armature (45) and said core (46) for magnetically saturating a portion of a magnetic circuit generated by energizing said solenoid.

Page 4

Application/Control Number: 10/288,292

Art Unit: 3747

Bergstrom (5,328,100) shows a groove (30) formed in the vicinity of opposed surfaces of an armature (20) and a core (14) for magnetically saturating a portion of a magnetic circuit generated by energizing said solenoid.

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the admitted prior art by using a groove in the vicinity of opposed surfaces of the armature and the core. The motivation to do so would have been for reducing certain audible operating noise from the solenoid valve, see column 1,II.10-11. With regard to claim 3, said groove (30) is formed in said armature (20).

With regard to claim 4, said groove (20) is formed apart 2-4 mm from an attraction surface of at least one of said core and said armature.

6. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over admitted prior art (APA) of figures 4-6 in view of Bergstrom (5,207,387).

The APA shows all the limitations as applied to claims as applied to claims 1,3 and 4 above, except for the groove being formed in the core.

Bergstrom (5,207,387) discloses a groove (30) formed in the core (14).

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the APA by forming a groove in the core as disclosed by Bergstrom. The motivation to do so would have been for reducing certain audible operating noise from the solenoid valve, see column 1,II. 9-11.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited references show solenoid valves.

Page 5

Application/Control Number: 10/288,292

prior art under 35 U.S.C. 103(a).

Art Unit: 3747

8. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g)

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mahmoud Gimie whose telephone number is 703-305-1037. The examiner can normally be reached on 7 a.m. -3:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry Yuen can be reached on 703-308-1946. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0861.
